

Gedden Grows and Will Offer New Solutions

Beloil, October 19th 2012

To answer the growing international demand for carbon solutions, Gedden is switching to Will Solutions inc (Will). Will's mission is to open up new markets to small emitters of greenhouse gases (GHGs).

Will retains a worldwide reputation for proposing innovative, adaptable and productive solutions to attain GHG reduction goals. By bringing together a large number of small emitters into a single Carbon Group, Will offers a new solution to accurately quantify the smallest actions aimed at diminishing GHGs.

Will Solutions inc. offers comprehensive in-house solutions to implement sustainable business practices based on full cycle waste management and the optimization of energy and transportation demands for governments, businesses and NGOs. All of these in-house solutions designed by Will allow GHG emitters to quantify their reduction efforts and convert those efforts into valuable carbon credits that are then traded worldwide on voluntary markets.

Will Solutions, keeping in step with local actions for a global reaction. Offering a win-win-win for you, businesses and the planet.
